STATEMENT OF WORK

Organization	University of Regina – Protective Services
Project Name	UR Lost & Found
Date Produced	March 4, 2026

Technical Specifications

The UR Lost & Found System is a web-based platform designed to support Protective Services staff at the University of Regina in managing lost and found items across campus. The system will provide a centralized platform that allows authorized users to record, track, search, and manage lost items reported to Protective Services.

The platform will include features for logging item descriptions, recording the date and location where items were found, and updating item status when items are returned. The system will be implemented using a web-based architecture following the MVC design.

Time Period/Key Milestones

Milestone	Description	Time Period
Core System	Implementation of the foundational system components including staff authentication, the ability to add lost and found item records, and database storage for item information.	8/3/2026 – 13/3/2026
Item Management	Development of item management capabilities including editing item records, archiving records, and improving record display and navigation within the system.	15/3/2026 – 20/3/2026
Improved Working Product	Implementation of advanced functionality including search capabilities, filtering options, and user interface improvements to enhance usability.	22/3/2026 – 27/3/2026

Location of the Work

Development work will be performed remotely by team members and coordinated through the team's GitHub repository. The intended operational environment for the system is the University of Regina campus, specifically within Protective Services offices.

Special Requirements
The system must be designed to ensure secure access for authorized Protective Services staff only. Data related to lost items and claimants must be handled responsibly and update securely.
