Recall

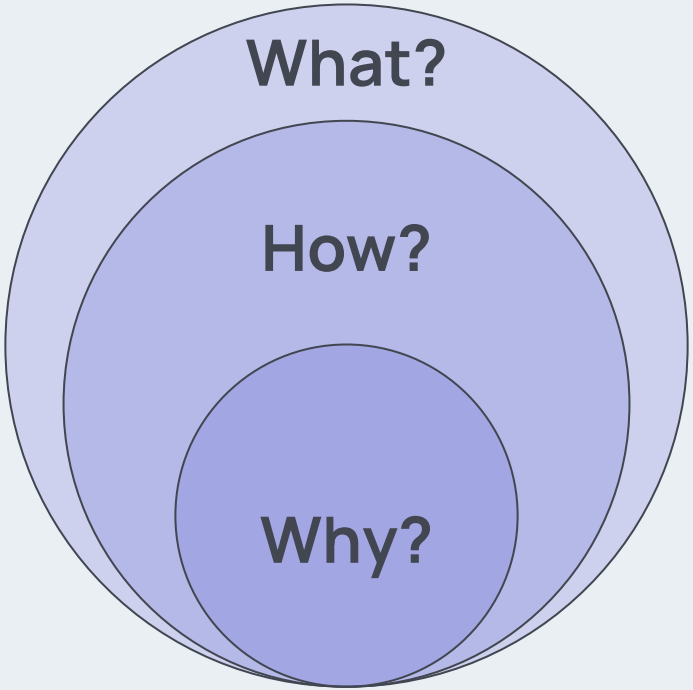
Project Overview



What -

- Centralizes lost and found inventory management and lost item reports
- Enables staff to log and manage found items in a standardized manner

How -

- Through a business-driven, stakeholder-focused design.
- Ensuring artifact aligns with existing university processes to ensure the system fits naturally within current staff workflows.

Why -

- To help protective services in logging and tracking lost and found items at the University of Regina's campus

02

Stakeholders

Stakeholder Register

Stakeholders

Protective Services
Role: Primary System Admins
Power: High | **Interest**: High
Support: Supportive

Dr. Maciag
Role: Academic Sponsor
Power: High | **Interest**: High
Support: Supportive

Amr Azouz
Role: Project Manager, Front End Developer
Power: High | **Interest**: High
Support: Supportive

Cobie Caburao
Role: UI/UX Designer, Front End Developer
Power: High | **Interest**: High
Support: Supportive

Gabriel Sampaga
Role: Documentation, Back-End Developer
Power: High | **Interest**: High
Support: Supportive

Glen Issac
Role: Back-End Developer
Power: High | **Interest**: High
Support: Supportive

Campus Community
Role: Occasional Reporters
Power: Low | **Interest**: Low
Support: Neutral

03

Project Requirements

Functional Requirements

User Authentication

- Users must login before accessing the system
- Access restricted to authorized Protective Services staff

Item Management

- Staff can add new lost or found items
- Staff can edit item details
- Staff can delete item records

Item Information

- Each record includes description, category, date, time, and location
- Records stored in a centralized database

Search Functionality

- Staff can search records using keywords or filters
- System displays a list of all stored item records

Technical/Performance Requirements

Technical Requirements

- System follows MVC (Model–View–Controller) architecture
- User authentication verifies authorized personnel
- Centralized database stores item records
- Web-based application accessible via browsers

Browser Compatibility

- Must support modern browsers such as Google Chrome or Firefox

Performance Requirements

- System supports multiple users simultaneously
- Search results load within 2 seconds
- System prevents unauthorized access

04

Project Scope

Project Deliverables

Documentation
- Project scope and requirements documentation
- User guide for authorized personnel
- Agile development process

UML Diagrams
- Diagrams illustrating system design and user interactions

Web Applications
- Staff authentication and secure login
- Log, edit, delete, and search lost items

Database Implementation
- Centralized storage of lost and found records
- Access restricted to Protective Services

Testing
- Verification of authentication and item management features
- Validation of search, editing, and deletion functionality

Project Exclusions

Public Access

The system will not be accessible to students or external users. Access is restricted to internal university personnel

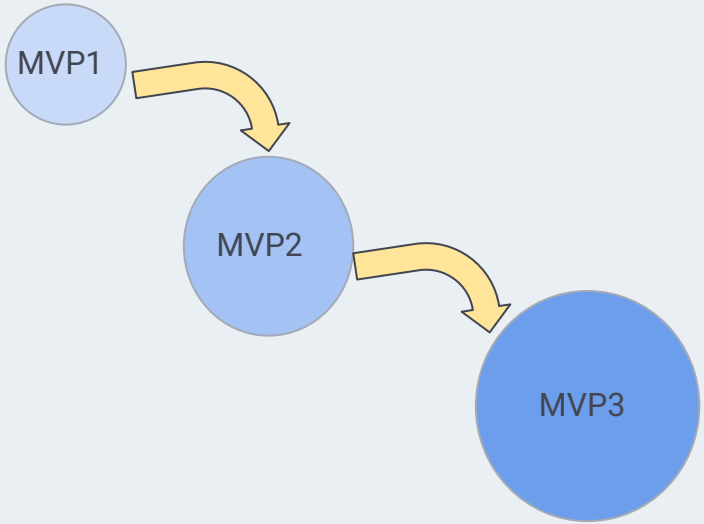
Restricted Usage

System access limited to authorized Protective Services personnel only. Unauthorized users cannot view or manage lost and found records

05

MVP

MVP Agile Development Process



MVP 1 - Core System

- Staff authentication (login system)
- Add lost and found item records
- Database storage of item information

MVP 2 - Item Management

- Edit item records
- Archive item records
- Improved record display and navigation

MVP 3 - Improved Working Product

- Search Functionality
- Filters
- UI Improvements

06

Kanban

In-Progress Kanban for UR Lost & Found

Backlog | MVP View | Team items | Roadmap | My items | + New view

Filter by keyword or by field

Product Backlog (5 / 5) Estimate: 0

To Do / Ice Box

- Lost-and-Found #7
  Initialize Node/Express project for backend routing (POST/GET)
  MVP2 back-end Mar 18, 2026
- Lost-and-Found #9
  Adding/Logging Items via POST and GET
  MVP2 back-end Mar 23, 2026
- Lost-and-Found #6
  Alpha Test with Client & UI Improvements
  MVP3 testing Apr 2, 2026
- Lost-and-Found #8
  Implement Search Functionality & Filters
  MVP3 enhancement Apr 8, 2026
- Lost-and-Found #10
  Automated Email notifications via Node.js
  back-end enhancement

+ Add item

In progress (3 / 3) Estimate: 0

Currently being worked on

- Lost-and-Found #3
  Finalize Static HTML, CSS for adding items
  MVP1 front-end Mar 11, 2026
- Lost-and-Found #1
  Research Supabase, PostgreSQL & setup Database storage for item records
  MVP1 back-end database Mar 14, 2026
- Lost-and-Found #4
  Implement Staff Authentication (Login System) (JSON)
  MVP1 auth Mar 12, 2026

+ Add item

Done (2) Estimate: 0

This has been completed

- Lost-and-Found #2
  Implement a Lo- & Hi-Fidelity prototype for the Client
  Pre-MVP documentation front-end
- Lost-and-Found #5
  Pitch an initial business case to Protective Services
  Pre-MVP documentation

+ Add item

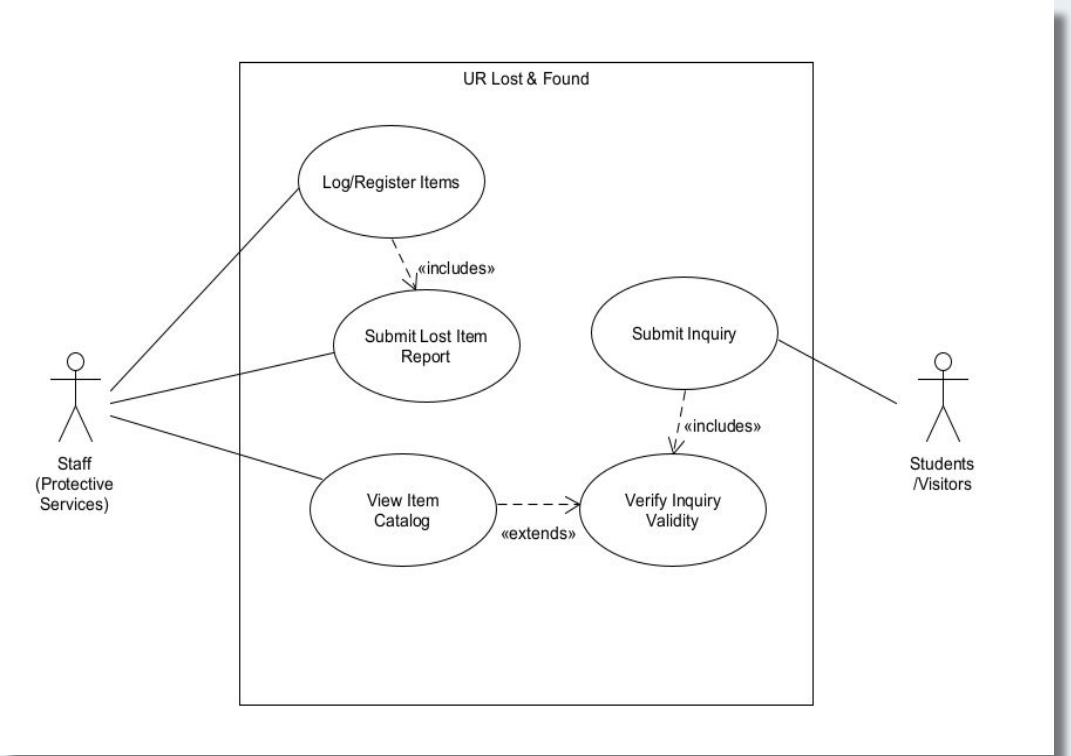
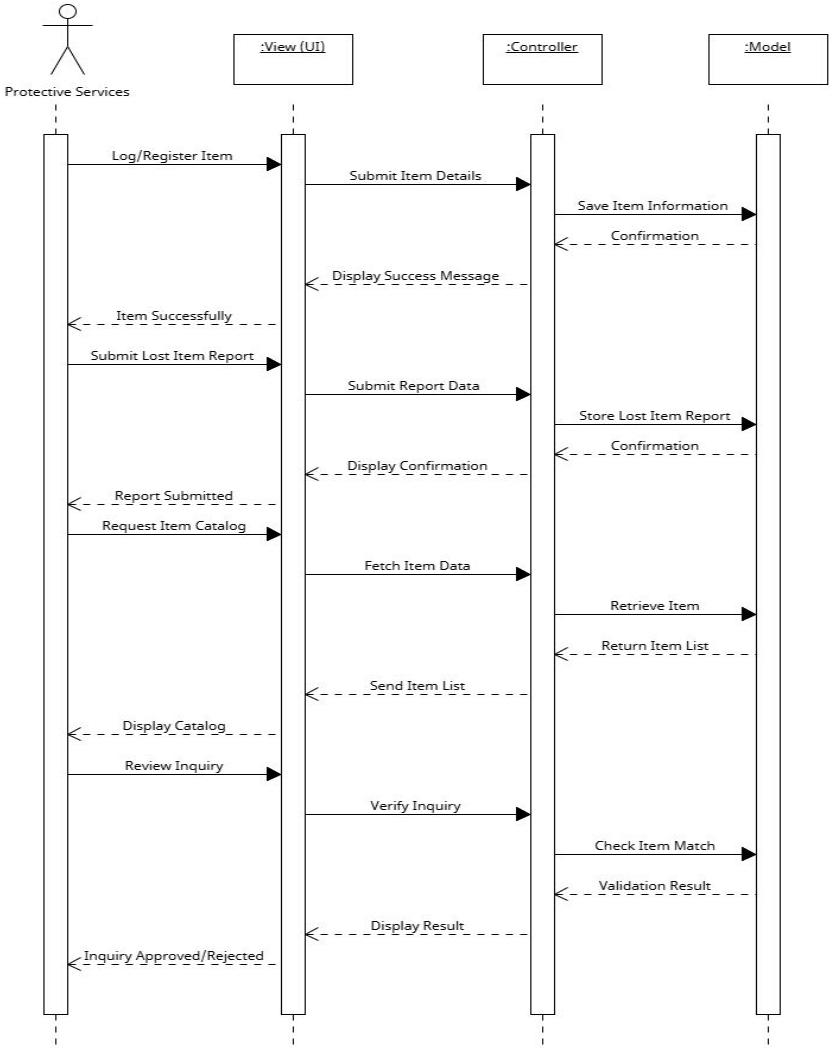
Modeling & UI artifacts

Use Case Diagram

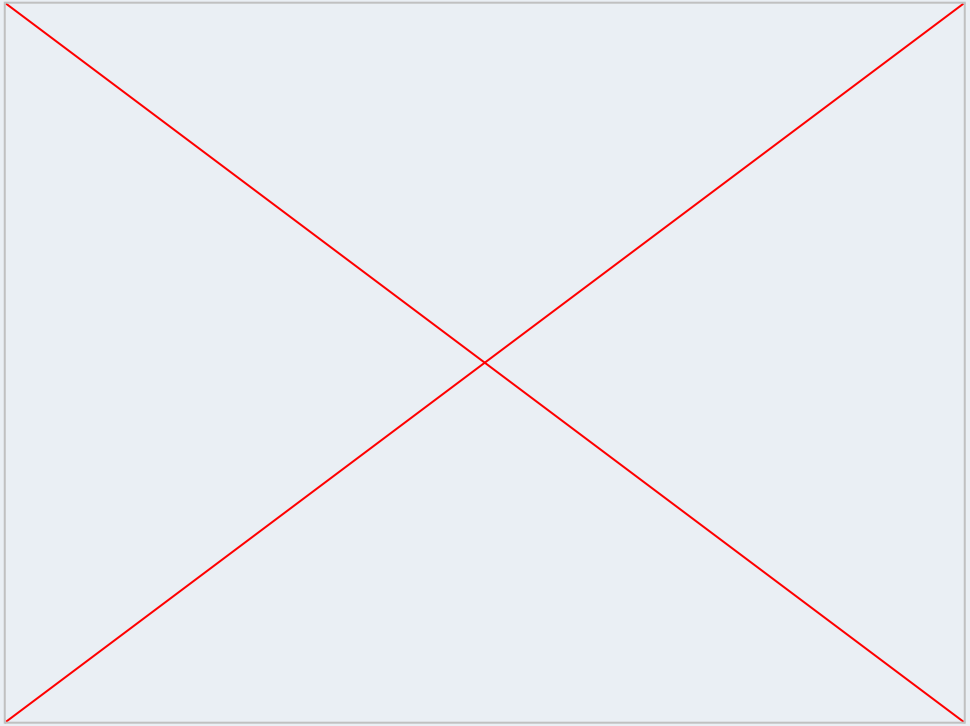


Sequence Diagram

- Focuses on high-impact operational capabilities
- Validates MVC architectural separation
- Ensures early delivery of a functional and useful system
- Provides scalable foundation for iterative feature expansion



High-Fidelity Prototype



09

Self Reflection

Opinions

1. How did we feel about this activity? What did we like about it? What did we dislike about it?
This activity helped our team better understand the scope and structure of the project. It was useful for organizing requirements, stakeholders, and development plans. One challenge was coordinating ideas and ensuring everyone agreed on the project details.

2. What is our team most proud of with respect to the work accomplished in this project deliverable?
Our team is most proud of clearly defining the project scope, functional requirements, and MVP stages. We believe our documentation and diagrams effectively communicate how the system will be designed and developed.

3. What did we learn about yourself as we collaborated and worked on this activity (individually and as a team)?
We learned the importance of communication and dividing responsibilities when working as a team. Each member contributed different ideas, which helped improve the overall quality of the deliverable.

4. How will we use what you have learned from this activity going forward?
We will apply the planning and documentation strategies we used in this activity to guide the development of our project and ensure that tasks are completed in an organized and incremental way.

5. What “stuff & things” related to this activity would we like more help with?
We would appreciate more guidance on ensuring our system architecture, UML diagrams, and MVP planning align with best practices and project expectations.
